The U.S. lift Truck division located in Cleveland has a professional team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Start-up of the lift truck business

At first the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion venture. Sales of these products were initially targeted to state-run firms, large scale corporations, and the military. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical instruction became the new focus for enhancing quality and product development.

Forklift Export Growth

Home-based forklift business for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980â??s, Daewooâ??s progressive technological advancements combined with sales success placed them in a situation of substantial expansion of their forklift operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to counter act competitive pressures in the US materials handling industry. This venture greatly expanded Daewooâ??s forklift sales. Construction was completed in 1984 to facilitate a new plant which helped set up the company for the fabrication of high end added-value products suited for export. In 1993, the company had a global sales system and started exporting designs they had developed through in-house expertise, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into international marketplaces.
